THE MOST WELL-PLANNED BABY MAY NEVER BE BORN.

Without Penetrak™ Cervical Mucus Penetration Test.

Ten years ago, they planned to have a child in five years. They considered every last detail. Except infertility. So, they've come to you for help.

For the Quantitative Measurement of Sperm Penetration.

Penetrak, a unique method to assess male infertility, is an objective, standardized test for the measurement of the forward progression of sperm in cervical mucus. Because even when a semen analysis indicates normal morphology, sperm count and motility, the sperm may be incapable of penetrating the cervical mucus—a major cause of infertility.

The biochemical composition, viscoelasticity, ferning pattern and structure of Penetrak are remarkably similar to human mucus and provide a standardized medium to evaluate human sperm independent of the variables associated with the female partner's mucus. And Penetrak can be performed at the same time, using the same simple techniques as a routine semen analysis.

See For Yourself.

Both you and your patients will reap the benefits of this simple, convenient and inexpensive, in-office screening procedure. Send today for a Penetrak kit, containing a graduated slide, 20 capillary tubes of frozen Penetrak medium and easy-to-use instructions.
