MicroCell™

Three new concepts in a semen analysis chamber

- Safety
- Convenience
- Accuracy

Now you can be as sure of your infection control as you are of your test results, with MicroCell disposable chambers. Technicians never have to come in contact with potentially infectious samples — during or after analysis. MicroCell's patented fixed-cover design allows quick sample loading, without sample dilution or tedious precision pipetting. Its microfluidic capillary action draws the sample into place instantly, for rapid analysis by any manual or automated method. And each analysis is performed in a clean, residue-free chamber, unaffected by previous use or wear. Following analysis, simply discard the MicroCell and avoid the hazard and interruption of washing a dedicated chamber.

MicroCell is ideal for all types of particle counting in addition to semen analysis. Its dual chamber design accommodates two samples per slide for duplicate analysis of one specimen, or two specimens per slide. And since every MicroCell is precision manufactured to the same micron depth, sample to sample consistency is assured.

MicroCell... for safety, convenience *and* accuracy. For more information, complete the coupon or contact Fertility Technologies, Inc.
