Journal of
Andrology

BERNARD ROBAIRE

Published for THE AMERICAN SOCIETY OF ANDROLOGY
by J. B. LIPPINCOTT COMPANY Philadelphia

Increase surgical efficiency and reduce operative time!

- Impeccably handcrafted of the finest stainless steel.
- Ideal balance for easy rotation.
- Extender is adaptable to all instruments.

- Eight different combinations of scissors, forceps, and needle holders (straight or curved).

Dual-Ended, Surgical Instrument System

Switch instruments with a flick of the fingers!

Instructions to Authors

5174-1
335-1

The Journal of Andrology publishes original papers and reviews on clinical and laboratory research pertinent to structure and function of the male reproductive system and male gametes. *Authors are requested to submit a covering letter with their manuscript stating that the material contained in the manuscript has not been published, has not been submitted or is not being submitted elsewhere. Receipt of this statement is a condition of acceptance of the manuscript for publication.* Exception is made for abstracts of papers presented to the annual meeting. Membership in the Society is not required for submission of a manuscript.

All manuscripts will be reviewed by two members of the Editorial Board or *ad hoc* reviewers and, in case of a disagreement, by a third reviewer. In the covering letter, the author may suggest a person or persons whom he/she feels is especially appropriate (or inappropriate) for reviewing the manuscript.

A basic charge of \$35 will be assessed for each printed page (except for invited review articles). However, an author's inability to honor page charges will not affect publication of acceptable manuscripts.

The contents of the Journal of Andrology are now listed in both *Index Medicus* and *Current Contents*. Abstracts of 225 words or less will be entered into the MEDLINE data base system, a service of *Index Medicus*.

The Society endorses the principles embodied in the "Principles of Laboratory Animal Care" formulated by the National Society of Medical Research and the "Guide for the Care and Use of Laboratory Animals," published by the National Institutes of Health, and expects that all investigations involving animal experimentation reported in the Journal will have been conducted in conformity with these principles.

Send the manuscript (including all illustrative material) in triplicate to the Editor:

Dr. Marie-Claire Orgebin-Crist
Editor, *Journal of Andrology*
Department of Obstetrics and Gynecology
Vanderbilt University
Nashville, Tennessee 37232
(615) 322-7484

Preparation of the Manuscript

The manuscript must be in English. Three complete sets of the manuscript should be submitted. Standard size 8½ × 11 inch (21 × 28 cm) bond paper,

double spacing, and margins of at least 1 inch (2.5 cm) should be used throughout. Contributors should use paper with numbered lines or should number each line on the left margin. All pages should be numbered consecutively, beginning with the title page. Each of the following sections should begin with a new page:

Title page. The title page should give (i) the title of the manuscript, (ii) a short running head of not more than 40 spaces; (iii) first name, middle initial, and last name of each author; (iv) department(s) and institution(s) where the work was done; (v) name and address of the author to whom correspondence and reprints should be addressed; and (vi) source(s) of support in the form of financial aid, grants, or equipment.

Abstract. An abstract of not more than 150 words should state the objectives, the findings, and the conclusions. At the end of the abstract, three to 10 key words or short phrases should be provided for indexing purposes.

Text. The text of full length, original articles should be divided into the following sections: Introduction, Methods, Results, and Discussion. However, the author(s) may use another format if it is more appropriate for presentation of the material.

References. In the text, the references should be quoted by the name and date system, e.g. Smith and Jones (1972) or (Smith and Jones, 1972); and, in the case of three or more authors, the name of the first author followed by et al should be used. The references should be listed alphabetically at the end of the paper using the format noted below. All authors should be listed.

Standard journal article:

Alexander NJ, Fulham DL. Antibodies to spermatozoa in male monkeys: mode of action. *Fertil Steril* 1978; 30:334-342.

Books and other monographs:

Wallach ED, Kempers RD, eds. Modern trends in infertility and conception control; Vol 2. New York: Harper & Row, 1982.

Chapter in book:

Stewart JM. Pharmacology of LHRH and analogs. In: Zatzuchni GI, Shelton JD, Sciarra JJ, eds. LHRH peptides as female and male contraceptives. New York: Harper & Row, 1982; 2-12.

TEST-SIZE[®] PLUS

TEST-SIZE[®] Plus is an orchidometer set with 14 pieces from 1 to 35 ml. It is a valuable tool for following testicular development and for assessing spermatogenetic function.

The correlation between the sperm concentration in semen and male fertility has often led to an ignorance of the fact that men with a low sperm count also can father children particularly if motility and morphology are good. The quality and not the quantity of the spermatozoa in an ejaculate determines the potential fertility.

The quality of the spermatozoa depends on many factors. Efficiency of the spermatogenetic epithelium is one. A non-invasive method to assess this efficiency is to determine the number of spermatozoa in the ejaculate after correction for two important parameters, i.e. number of days since the previous ejaculation and the size of the testes. Figure 1 and Table 1 contain the principle information to explain this.

TEST-SIZE PLUS contains 14 pieces of yellow plastic models with sizes from 1 to 35 ml. Total weight approx. 45 gram. Price per set US\$ 45.00 including air mail.

Send your order to Remcat Trade AB, POB 5011, S-162 05 Vällingby, Sweden.

Institutions can send a purchase order and will be invoiced. Individuals are requested to enclose an international money order payable to Remcat Trade AB.

TEST-SIZE is a trademark of Remcat Trade AB.

Fig. 1. Principle relation between number of spermatozoa in the ejaculate and days of abstinence.

Subject	A	B
Sperm. conc. [mill/ml]	60	20
Semen volume [ml]	2	6
Abstinence [day]	6	2
Testicular size [ml]	60	24
Sperm. production [mill./day x ml testis]	0.3	2.5

Table 1. An example to demonstrate the difference between sperm. concentration and 'efficiency' of the germinal epithelium.

munications should be clearly identified as such in parentheses within the text and should not be included in the list of references. It is the author's responsibility to ensure that all references are correct.

Tables. Tables should be typed double spaced on separate pages, numbered consecutively, and cited in the text.

Illustrations. Figures should be professionally drawn and/or photographed and preferably 5 × 7 inches (12.7 × 17.3 cm) in size but not larger than 8 × 10 inches (20.3 × 25.4 cm). Submit sharp, clear, glossy black and white photographic prints. Do not send the original of ink drawings, roentgenograms, or other material. On the back of each figure, the author's name, number of the figure, and the top should be indicated with a soft-leaded pencil or with a typed label. Each figure should be numbered and cited in the text in consecutive order. A charge will be assessed for color reproduction.

Legends. Figure legends should be typed on a separate page and should provide sufficient detail to make the figure understandable without reference to the text. Explain internal scale and identify the method of staining in photomicrographs.

Rapid Communications

At the request of the author(s), manuscripts will be considered for processing as rapid communications. Manuscripts must be **eight double-spaced,**

typed pages or less (including figures, legends, and references). Information regarding style and format is available from the Editor upon request.

Each manuscript will be subjected to review by two members of the Editorial Board or *ad hoc* reviewers. Manuscripts that are accepted for publication will be published shortly after receipt of the final version.

Review Articles

From time to time, the Journal will publish reviews on subjects of particular interest to its readers. In general, the subject matter will be selected by the Editorial Board, and the Editor will solicit submission of the manuscripts. However, unsolicited reviews will also be considered for publication and will be subject to the same process of review as original articles. It is suggested that prospective contributors of unsolicited reviews consult with the Editor before preparing and submitting the text.

Announcements

The Journal will publish, free of charge, announcements of meetings, postgraduate courses, symposia, and other events of interest to andrologists. The information should be submitted to the Editor and should include the type of event, the sponsoring organization, the location and date, and any other pertinent information.
