Cover: *The photomicrograph was taken from an immunofluorescent section of human penile cavernous body obtained from a gender reassignment operation. The Stefanini's/Zamboni's fixed frozen section was stained with indirect FITC immunofluorescence using polyclonal rabbit antibodies to protein gene-product 9.5 (PGP-9.5, green) and counterstained with 0.1% pontamine sky-blue (red). PGP-9.5 is a well-acknowledged marker for demonstration of the overall innervation in tissue sections, as seen here in this large blood vessel densely surrounded by nerve fibers.*
