Cover: *Differential expression of clusterin mRNA in the adult mouse caput. Section of adult epididymis hybridized to radiolabeled pG21-04 (clusterin) antisense probe. The steady-state level of clusterin mRNA is not detected in the efferent ductules and is very low in segment 1. Steady-state levels increase in segments 2-4 and then decrease again in segment 5. (See article by Ahuja et al.)*
