- Cover:** *A drawing showing the morphological connections of rete testis, efferent ductules, and the epididymis. Approximately 4 to 7 proximal efferent ductules exit the rete testis and form highly convoluted ductules that merge in the conus region. The small, highly coiled common efferent ductule enters the capsule of the epididymis and abruptly changes into the larger initial segment of the epididymis. See Oliveira et al on p 590.*
